

Collaboration Agreements with DLR

Dr. Kumagai, the President of RTRI, and Prof. Dr. Ehrenfreund, the Chair of DLR at signing ceremony

The Railway Technical Research Institute and the German Aerospace Center (DLR) concluded a Letter of Intent to build a close relationship and also signed a collaboration agreement on research in the field of large-scale 3D model experiments on micro-pressure waves.

RTRI and DLR have been sharing information on railway technologies so far. In 1997, one of RTRI's researchers stayed at DLR and conducted collaborative research on the measurement of aerodynamic noise at a wind tunnel. Since both organizations

have strongly recognized the necessity to conduct collaborative research and personnel exchange, they concluded the letter of intent (LoI) to deepen their tie for the future.

Under this LoI, both parties will implement collaborative research, hold management meetings in order to further strengthen the RTRI-DLR relationship and share views for the further research collaboration including the collaborative research agreed this time.
